

New Energy Resource for Maryland Homeowners

**PRESS RELEASE – November 2006
Baltimore MD**

Energy rates continue to rise with no end in sight. The recent 72% rate increase for BG&E residential customers and the high volatility of oil prices have made home energy usage an immediate concern. Homeowners have also become increasingly anxious about home air quality and its impact on their families' health. In addition, there is a growing concern regarding global warming and a corresponding desire to reduce one's personal impact on the environment.

Performing a Blower Door Test for air infiltration

Help has arrived. *TerraLogos Green Home Services* provides cost-effective solutions, which will reduce energy bills and create healthier, more comfortable homes while increasing resale value. In addition, their package of services will allow homeowners to take the first, easy steps towards reducing their personal impact on global warming.

Using the Home Energy Tune-uP® program developed by CMC Energy Services, coupled with the latest building analysis tools, they perform an affordable, comprehensive inspection which reveals a home's energy and health issues. The inspection report provides the information needed to choose wisely the best strategies to improve the home's energy efficiency and indoor air quality.

The energy improvement plan can be put into action easily using the TerraLogos pre-qualified network of green contractors. TerraLogos assists the homeowner during the improvement work to assure that all is done properly and the planned benefits are realized.

Focusing on existing houses in the greater Baltimore area, *TerraLogos Green Home Services* brings the latest developments in green building design to Maryland homeowners. Their acclaimed sister company, *TerraLogos: eco architecture, pc*, has been – and continues to be – instrumental in the promotion and realization of the best green building projects in the mid-Atlantic region.

Building on 30 years of combined experience in green building design, *TerraLogos Green Home Services, Inc.* is uniquely qualified to provide the integrated approach which will benefit homeowners, saving them money, time and frustration. Their whole-house approach and extensive knowledge of green building practices give them the capability to prioritize solutions and assure that all work is done correctly.

Through these services, Maryland homes will become healthier and more comfortable for their occupants, less costly to maintain for their owners, and will reduce their reliance on non-renewable resources. This is true home improvement which benefits Maryland families and the planet.
